

An MSDS Management System Designed for School Districts

“Remote access to our Material Safety Data Sheets helped us save the life of a student who had ingested a hazardous chemical.”

Kelly Breeding, Director of EHS,
Fayette County Schools

“Having electronic versions of our MSDS binders makes it so easy to update and organize the chemical inventory throughout the entire district.”

Rob Amodio, Business Manager,
Fairfield City School District

Constantly updating your chemical inventory and MSDS binders can be quite a task, but it's something that has to be done. So if you're looking for a tool that will help ease the pain, why settle for something that hasn't been specifically designed for school districts?

SchoolMSDS organizes, updates, and stores your chemical inventory lists and MSDSs into virtual binders. Virtual binders are stored in a “facility tree,” which further organizes your chemical inventory by work area. And, with just a few clicks, you can easily print out virtual binders, turning them into neatly organized physical binders.

While there are a handful of MSDS solutions available, SchoolMSDS is the only MSDS management system that was developed around the unique needs of school districts.

- Easily create and update virtual MSDS binders
- Remote access to MSDS binders in case of emergencies
- A “Facility Tree” organizes your chemicals and binders by work area
- Print out physical MSDS binders with just a few clicks
- Repository of chemicals and MSDSs commonly found in school districts
- Search and retrieve tool to help you populate your MSDS binders
